

GadgetTrak for USB

Theft protection for your valuables

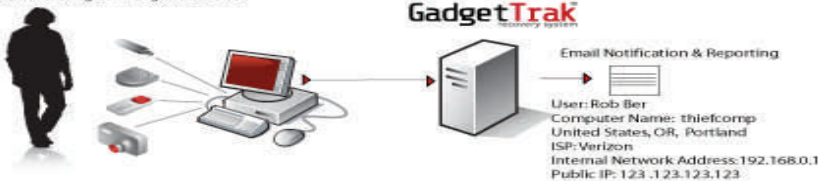

IMMOBILISE 
PROPERTY CRIME

GadgetTrak USB™ is GadgetTrak's patent-pending theft recovery system for removable media devices. GadgetTrak USB software is installed on the storage device prior to being stolen. Supported devices include flash drives, digital cameras, SD memory cards, iPods, other MP3 players and other devices.

GadgetTrak USB is triggered when the storage device is accessed from a host system, or the user attempts to access specific files. When the agent is triggered, it communicates with our server transparently via an encrypted connection, even circumventing many common firewalls.

1. Thief plugs in a stolen device with the GadgetTrak agent installed

If the device has been reported stolen GadgetTrak USB collects information from the host system. Data is delivered to GadgetTrak and a report is generated with the time, username, computer name, internal network address, location (country, state/region, city), ISP (Internet Provider Information) and other data that relates to that connection.

GadgetTrak Reporting

When a device is connected and tracking is enabled for that device reports are created with detailed information regarding that devices "activities" including a map of where the device has been connected over time.

Don't let your
gadgets get stolen

Find out where they are
and who is using them.
GadgetTrak for USB will
send you an email

The email message
contains IP address,
internal network address,
host names as well as
location and ISP data.

Contact the Police and
provide the information to
get your gadgets back
