

PhoneBAK

Theft protection for your mobile life

PhoneBAK comes with **FREE Mobyko Premium** online data back up
See over for details

PhoneBAK is the new anti-theft software program for mobile phones, PDAs and Blackberry.

The program works stealthily in your mobile phone by automatically checking on the Subscriber Identity Module (SIM) card without the knowledge of the unauthorized user

PhoneBak is triggered when the SIM in your phone is replaced with an unauthorized one. When this occurs PhoneBak will silently send SMS messages to pre-defined numbers you have entered (spouse, IT department etc), the information gathered will depend on the platform, but will usually include:

- ✓ The new phone number of your phone
- ✓ The IMEI (International Mobile Equipment Identity)
- ✓ The IMSI (International Mobile Subscriber Identity)
- ✓ GSM Area Code
- ✓ Cell ID - GSM Localization

With this information you can contact the person who has your phone in the event it was simply "lost," or contact the police with the details who can follow up with the service provider to locate the phone and get it back

Your phone
lost? or stolen?

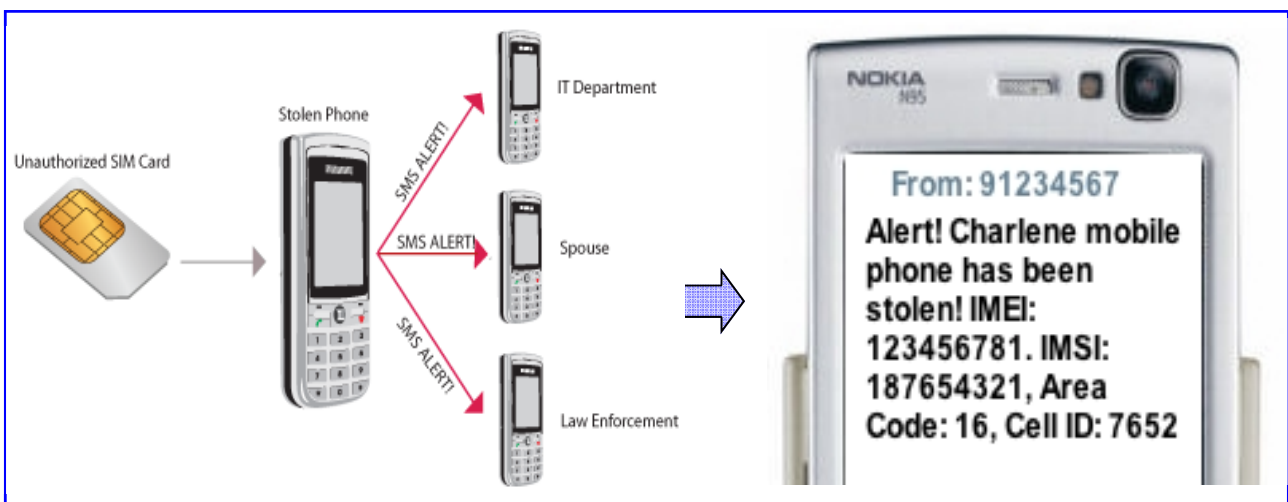

Alert text messages are sent by your phone to your pre-defined phone numbers

Text message contains the thief 's own mobile number, IMEI, IMSI, area code and Cell ID

Contact the Police and provide the information to get your phone back

Technical

Operating Systems (depending on platform)

Symbian,
 Windows Mobile 2003, 2003SE,
 Windows Mobile 5&6
 Java Platform

SMS Text Notification

When an unauthorised SIM card is inserted to the mobile phone, two SMS Text messages will be sent out immediately to your pre-defined (local & overseas) phone numbers (e.g. spouse, colleague, I.T. dept).

The text alert will contain the thief's own mobile phone number along with information that will help get your phone back such as IMEI, IMSI numbers, GSM Area Code & GSM Localization Cell ID.

Customisable Alert

You can personalize the SMS Text message to be sent as well as the numbers that the alert is sent too.

Auto Start Up

PhoneBAK autoruns every time the phone is powered up. Once run it does not consume any resources.

Supported Languages

English, Arabic, Chinese, French, German, Spanish, Thai and Russian.

Low Memory Resource

During the day-to-day usage of the phone with an authorised SIM, the program will not use any memory resource and does not run in the background. PhoneBAK will only run once when mobile phone powers up and will automatically turns off once the IM(s) card is authorised.

Multi SIM Cards

Up to 10 SIM cards can be supported per phone. There is advanced password protection to ensure no unauthorised access to the PhoneBAK programme.

Keeping your data safe

Keep all your contacts, picture and phone data safe by backing it up securely across the Internet.

Then when you get your phone back or upgrade to a new model, one call to your Mobyko account and back comes your whole mobile life.

Best of all Mobyko Premium comes FREE with PhoneBak along with 100 free text messages, 10 FREE download and much more.

Order PhoneBak Now and get Mobyko Premium Free. A great combination

The only way to secure your mobile life.
